J. World's Poult. Res. 3(1):

ABSTRACT: Animal production is an integral part of Ghana's agricultural economy and a major source of livelihood for many rural communities. This study aimed to investigate the challenges faced by small-scale farmers in the production of animals and to identify strategies that can be implemented to improve productivity. The research findings will be useful for researchers, policy makers and other stakeholders who will use this data in planning and making of policies, and to monitor changes that may occur overtime.

J. World's Poult. Res. 3(1):

ABSTRACT: The present study was undertaken to compare different diagnostic procedures for the detection of Newcastle disease and infectious Bursal disease in chickens. The study aimed to determine the reliability, sensitivity, specificity and accuracy of these methods. The results showed that RT-PCR assay was the most reliable, sensitive, specific and accurate test for the confirmation of the diseases. Clinical diagnosis, NDV, IBDV, HI, AGIDT, RT-PCR assay.

Key words: Clinical diagnosis, NDV, IBDV, HI, AGIDT, RT-PCR assay.
Effect of substituting yellow maize for sorghum on broiler performance

Original Article, C3
Ahmed M.A., Dousa B.M. and Abdel Atti Kh.A.
J. World's Poul. Res. 3(1):

ABSTRACT: An experiment was conducted to study the nutritional value of yellow maize when it substitutes sorghum grain as source of energy for broiler diet. Eighteen days old broilers were divided into five equal groups each containing 12 birds. The experiment lasted for 6 weeks. Feed intake and body weight gain had been recorded weekly. The results showed significant increase in weight gain when 12% of sorghum was replaced by yellow maize. Broiler, Maize, Sorghum, Performance
Seroepidemiological studies on poultry salmonellosis and its public health importance

Rural poultry farming with improved breed of backyard chicken
ABSTRACT: Livestock and poultry rearing is an imperative factor for improving the nutritional security of rural poor in India. Rural farmers rear Desi type chicken with low egg and meat production in backyard system. For developing the rural poultry farming, improved... a solution to food security to the needy villagers paving a way for sustainable agriculture in rural areas of India.

J. World's Poult. Res. 3(1):
ABSTRACT: During the present study, three species of the genus *Corvus* namely *Corvus monedula*, *C. splendens* and *C. macrorhynchos* were collected from different localities of Kashmir valley and investigated for the presence of cestode parasites. *Anomotaenia galbulae* (Gmelin, 1790) Furhrmann, 1932 was recovered from all the three host species. While, *Choanotaenia micracantha* was recovered only from *C. monedula* and no specimen of this cestode was obtained from *C. Splendens* and *C. macrorhynchos* during the present study. The specimens thus collected were identified as *Anomotaenia galbulae* and *Choanotaenia micracantha* on the basis of various morphological and morphometric characters when compared to the known species of genera *Anamotaenia* and *Choanotaenia* respectively. However, some intraspecific variations were observed.

Effect of Dietary Inclusion of *Zataria multiflora* on Histological Parameters of Bursa of Fabricius in Broilers

ABSTRACT: Regarding the remarkable role of bursa of Fabricius as a primary lymphoid organ in poultry, this study aimed to evaluate the effect of long term administration of *Zataria multiflora* as an herbal immunomodulatory agent on histological features of this organ in broiler chickens. To this end, fifty, one-day old chickens were randomly divided into five equal groups and fed with diets contained 0.5, 1, 1.5, and 2% of *Z. multiflora* (experimental groups) or basal diet (control group) for 45 days. On day 46, birds were slaughtered and bursa of Fabricius was histologically examined. The results showed a dose dependent increase in all histomorphometric parameters due to *Z. multiflora* administration and the highest increase was in the thickness of follicular cortex of birds treated with 2% *Z. multiflora*.

In conclusion, dietary inclusion of *Z. multiflora* during the rearing period of broilers, dose dependently affects histological structures of bursa of Fabricius in a way that may enhance its role as a lymphoid organ.
