**ABSTRACT:** Animal production is an integral part of Ghana's agricultural economy and a major source of livelihood for many rural farmers. Understanding the factors affecting animal production is crucial for developing effective policies and strategies to support the sector. This study provides data on the status of animal production in Ghana, which will be useful for stakeholders in planning and making informed decisions.

**Key words:** Agricultural economy, Animal production, Animal species, Meat production, Ghana.

**ABSTRACT:** The present study was undertaken to compare different diagnostic procedures for the detection of Newcastle disease and infectious Bursal disease in chickens. The study aimed to evaluate the effectiveness of conventional and molecular methods in diagnosing these diseases, with a focus on identifying reliable, sensitive, specific, and more accurate methods for confirming the diagnosis.

**Key words:** Clinical diagnosis, NDV, IBDV, HI, AGIDT, RT-PCR assay.
Effect of substituting yellow maize for sorghum on broiler performance

ABSTRACT: An experiment was conducted to study the nutritional value of yellow maize when it substitutes sorghum grain as a source of energy and protein in the diet of broilers. The experiment lasted for 6 weeks. Feed intake and body weight gain were recorded weekly. The results showed a significant increase in feed intake and body weight gain.

Rural poultry farming with improved breed of backyard chicken
ABSTRACT: Livestock and poultry rearing is an imperative factor for improving the nutritional security of rural poor in India. Rural farmers rear Desi type chicken with low egg and meat production in backyard system. For developing the rural poultry farming, improved strains of汉族 bred chicken are a solution to food security to the needy villagers paving a way for sustainable agriculture in rural areas of India.

A study on Cestode Parasites of Corvus spp. Species of Kashmir, India
ABSTRACT: During the present study, three species of the genus *Corvus* namely *Corvus monedula*, *C. splendens* and *C. macrorhynchos* were collected from different localities of Kashmir valley and investigated for the presence of cestode parasites. *Anomotaenia galbulae* (Gmelin, 1790) Furhrmann, 1932 was recovered from all the three host species. While, *Choanotaenia micracantha* was recovered only from *C. monedula* and no specimen of this cestode was obtained from *C. Splendens* and *C. macrorhynchos* during the present study. The specimens thus collected were identified as *Anomotaenia galbulae* and *Choanotaenia micracantha* on the basis of various morphological and morphometric characters when compared to the known species of genera *Anomotaenia* and *Choanotaenia* respectively. However, some intraspecific variations were observed.

Effect of Dietary Inclusion of *Zataria multiflora* on Histological Parameters of Bursa of Fabricius in Broilers

Original Article, C7

**Shomali T, Hamedi S, Paryani MR, Mohseni SM, Farzaneh M.**

*J. World's Poult. Res.* 3(1):

ABSTRACT: Regarding the remarkable role of bursa of Fabricius as a primary lymphoid organ in poultry, this study aimed to evaluate the effect of long term administration of *Zataria multiflora* as an herbal immunomodulatory agent on histological features of this organ in broiler chickens. To this end, fifty, one-day old chickens were randomly divided into five equal groups and fed with diets contained 0.5, 1, 1.5, and 2% of *Z. multiflora* (experimental groups) or basal diet (control group) for 45 days. On day 46, birds were slaughtered and bursa of Fabricius ... using a linear graticule. Number of follicles in plicae was also counted under light microscope. The results showed a dose dependent increase in all histomorphometric parameters due to *Z. multiflora* administration and the highest increase was in the thickness of follicular cortex of birds treated with 2% *Z. multiflora*.

In conclusion, dietary inclusion of *Z. multiflora* during the rearing period of broilers, dose dependently affects histological structures of bursa of Fabricius in a way that may enhance its role as a lymphoid organ.
